

MEKAINDEX™

A Reliable and Affordable Handheld THUMB INDEX GUN

Different versions of thumb-indexed products exist. One in which the identification for quick reference is printed on the front margin space; these may be individual letters or color bars. If letters are used, printing and folding variations may play havoc with register.

Thumb indexing utilizing gold-stamped labels mounted into the desired position is more labor intensive but aesthetically much more pleasing. Such machines are in existence but expensive for short runs. The need for the simple handheld pneumatic thumb index cutting gun prompted the design of the MEKAINDEX™... a tool that enables you to diversify your product line for increased profitability.

• Safe:	Safety is assured whereby operation of the cutter is conditional on a foot switch being depressed first.
• Versatile:	The MEKAINDEX™ is the ideal machine for the small binder or the in-house repair bindery for: <ul style="list-style-type: none">• Bibles• Card files• Dictionaries• Legislative and financial records and• Many other filing systems where quick reference is needed
• Simple & Effortless:	<p>The operator locates every individual page or group of pages for cutting. A strip of board is inserted, and these strips are then equally divided. The book-block is first placed on a platform where it is fanned and half-round index tabs are cut. Thereafter, if desired, tabbing with gold-stamped pressure-sensitive or preprinted labels follows.</p> <p>Although weighing only 4.5 lbs., the gun can be counterbalanced by an optionally available tool balancer making the unit light-weight and easy to move around for an effortless operation.</p>
• Minimum Maintenance:	The MEKAINDEX™ is ruggedly designed and built for heavy industrial use and trouble-free maintenance that will provide years of service with minimal maintenance.
